Data Privacy Detective Podcast – Episode 108: Identity Management

Identity management. Learn how an automated approach can defend against the rising tide of data hacks, thefts, ransomware attacks, and other assaults on private information. [Kevin Dominik Korte](#), IT Innovation and Growth Strategist of Univention, explains how an automated approach to login and other steps we take to connect to the internet and intranets can reduce the ability of bad actors to succeed in their attacks on IT systems, large and small.

Traditional identity management is more costly and risk prone than what can be designed into an automated IT system that includes privacy and security by design. Consider how digital identities can be managed to increase security and minimize data breach risk in Episode 108.
