Barbara Bennett

Data is at the heart of all AI technologies – from inputs like prompts, algorithms and training data, to outputs and usage. And with more companies, employees and consumers exploring and adopting AI, understanding the key elements of data governance in enterprise AI is crucial. This presentation provides guidance in navigating and complying with data privacy laws in AI use and development. It also examines security protections and challenges in AI applications and as a part of networks. Finally, we discuss the importance of structuring and documenting an overall data governance program to support innovation and mitigate risks to the organization.

This video was created for general informational purposes only as of the time of its creation and does not constitute legal advice, the formation of an attorney client relationship, or a solicitation to provide legal services.

Note: This webinar was presented by Frost Brown Todd in partnership with Lexology's Masterclass programming. For a deeper dive into this topic, read our article ***Managing Data Security and Privacy Risks in Enterprise AI***.
